## attribute

A characteristic of an object.

*Examples*

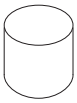

Shape, size, colour.

**(i)** Attributes of shape:
round, square, hexagonal ...

round and thin

**(ii)** Attributes of size:
thick, thin, small, big ...

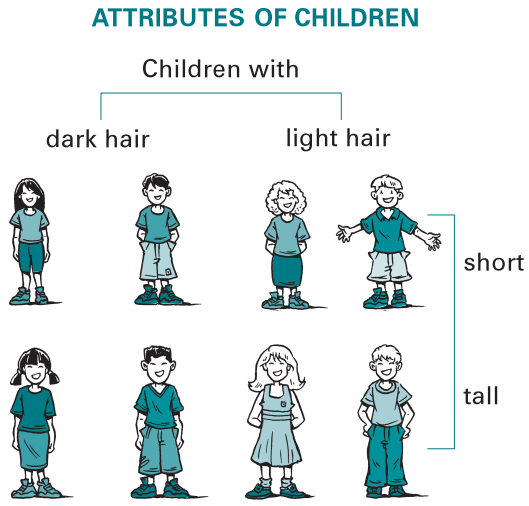

round and thick

**(iii)** Attributes of colour:
black, red, yellow ...

square and black

Other classifications different from the examples above are clearly possible.

*See* classify, property

## average

The average of a collection of numbers or scores is one score which represents the whole collection. It is found by adding all of the scores and dividing the answer (sum) by the number of scores.

*Example*

Find the average of scores 2, 5, 4, 6 and 3.

$$\text{Average} = \frac{\text{sum of scores}}{\text{number of scores}}$$

$$= \frac{2 + 5 + 4 + 6 + 3}{5}$$

$$= \frac{20}{5}$$

$$\text{Average} = 4$$

This is also called the mean or arithmetic mean.
