axis

(Plural: axes)

(i) The lines which form the framework for a graph. The horizontal axis is called *x*-axis, the vertical axis is called *y*-axis. Both axes are marked with equally spaced scales. The point where the axes intersect is called the origin (O).

Example

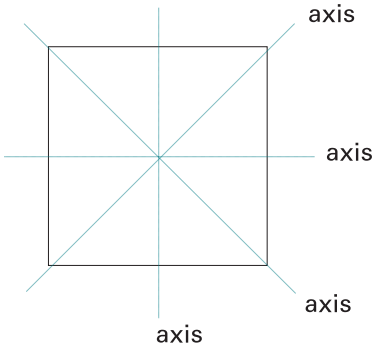

Axes are sometimes called:

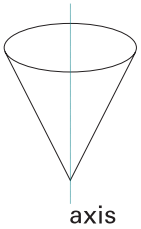

***x*-axis = abscissa**

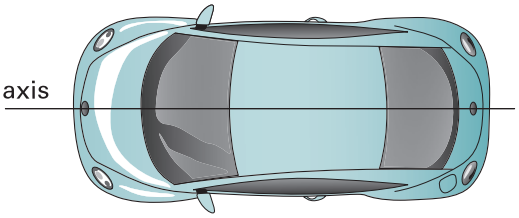

***y*-axis = ordinate**

(ii) A main line going through the centre of a figure or solid, also called a line of symmetry, or an axis of symmetry.

Examples

See coordinates, graph, horizontal line, intersection, line of symmetry, origin, vertical

axis of symmetry

See axis, line of symmetry
