decimal place-value system

A numeration system with ten as a base for grouping. Commonly called the 'base ten' system.

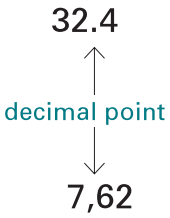

10^6	10^5	10^4	10^3	10^2	10^1	10^0	10^{-1}	10^{-2}	10^{-3}
millions	hundred thousands	ten thousands	thousands	hundreds	tens	units	tenths	hundredths	thousandths

See base, decimal point, place value

decimal point

A point or comma (used in Europe) that separates a decimal fraction from the whole number.

Example

See point

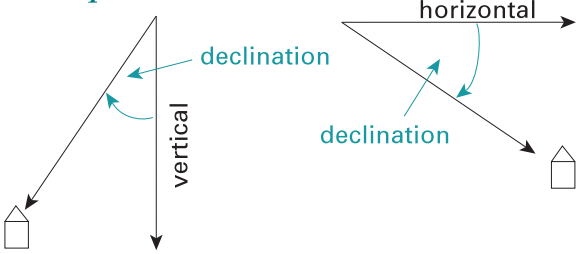

decimal system

See decimal place-value system

declination

The slope indicating where an object is compared to a vertical or horizontal position.

Example

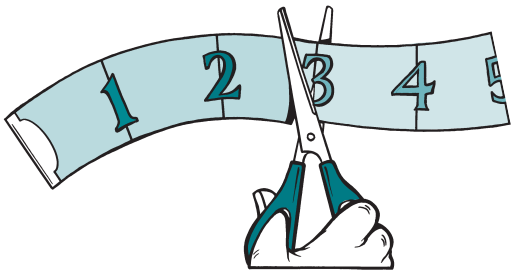

decrease

Make smaller. We either subtract a number or divide by a number.

Examples

(i) Decrease this length by 2 cm.

5 cm – 2 cm = 3 cm

We decreased 5 cm to 3 cm by cutting 2 cm off.

(ii) Decrease $100 five times.

$100 ÷ 5 = $20

$100 decreased five times is $20.

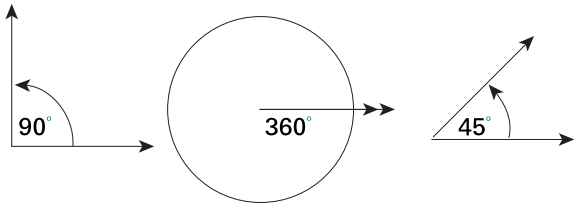

See increase, progression

degree

(Symbol: °)

(i) In geometry, a degree is a unit for measuring angles.

Examples

1 degree is divided into 60 minutes

1° (degree) = 60′ (minutes)

1 minute is divided into 60 seconds

1′ (minute) = 60″ (seconds)

(Don't confuse these with the symbols for feet and inches.)

(ii) The unit for measuring temperature.

See angle, degree Celsius, geometry, temperature, unit of measurement
