D

displacement

A change in the position of an object or of a quantity of material.

Example

The quantity of water displaced by an immersed object

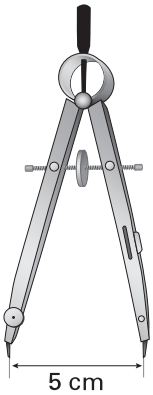

The water displacement method is used to measure the volume of objects. The volume of displaced water is equal to the volume of the object.

See volume

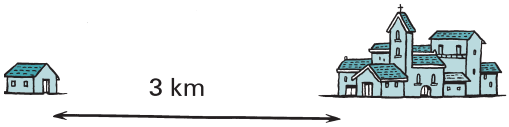

distance

The length between one point and another.

Example

Distance between the points of the compasses is 5 centimetres.

Distance from my house to town is 3 kilometres.

distribute

Give share of something to each; deal out as in division.

Example

Mum is going to distribute the cakes.

See division

distribution

See frequency distribution

distributive law

$a\,(b \pm c) = ab \pm ac$

Every term inside the grouping symbols is multiplied by the term that is immediately outside. This is also called expanding the expression or removing the grouping symbols.

See brackets, expand, expanded notation

dividend

A number which is to be divided by another number.

Example

$$24 \div 6 = 4$$

dividend divisor quotient

24 is the dividend.

See divisor, quotient
