(ii) Sharing (partition).

Example

Share 15 apples among 5 children. How many apples will each child get?

The apples are to be separated into 5 equal groups. The problem is to find how many there will be in each group.

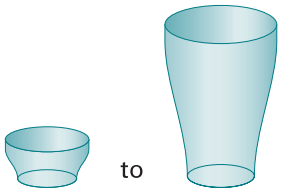

$15 \div 5 = 3$

(iii) Ratio.

Comparison between two quantities.

Example

10 : 100 = 1 : 10

Ratio 1 : 10

Mixing 1 part of cordial and 10 parts of water to make a drink.

See ratio

divisor

A number which is to be divided into another number.

Example

$$24 \div 6 = 4$$

dividend, divisor, quotient

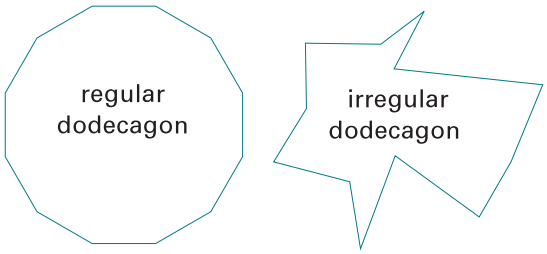

6 is the divisor.

See dividend, quotient

dodecagon

A polygon with twelve sides.

Examples

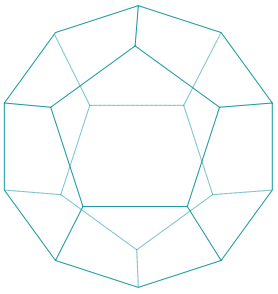

See polygon

dodecahedron

A solid (polyhedron) with twelve faces.

A regular dodecahedron is made by joining together twelve congruent regular pentagons.

Example

regular dodecahedron

See pentagon, polyhedron, regular polyhedron
