

a

(i) In formulas, the letter A stands for area.

Example

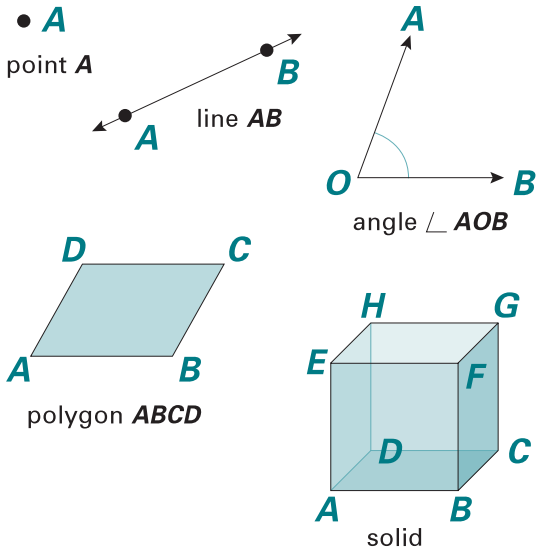

Area of a triangle

$$A = \frac{b \times h}{2}$$

(ii) A, and other letters, are used to name points, lines, angles and corners (vertices) of polygons and solids.

Examples

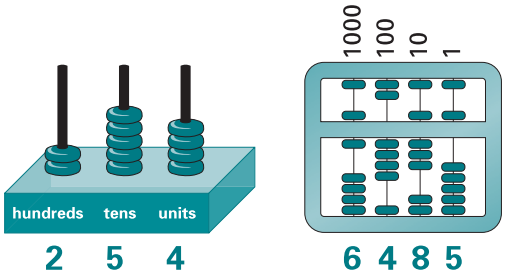

See angle name, area, formula, line, point, vertex

abacus

Usually a board with spikes or a frame with wires on which discs, beads or counters are placed. Used for counting and calculating.

Examples

abbreviation

A shortened form of writing words and phrases.

When writing shortened forms of words, we usually put full stops after the letters.

Example

Victoria: Vic.

Note: cm (centimetre) is a symbol. We do not write full stops after symbols.

Examples

m cm mm kg mL m^2 cm^3

See symbol

abscissa

The horizontal coordinate, or *x*-coordinate, of a point in a two-dimensional system of Cartesian coordinates is sometimes called the abscissa.

See axis, coordinates, ordinate
