- *Storage needed for the database*—If your company increases the amount of content in your blog, the database will grow, so the cost of storage will increase.
- *Storage needed on the NFS*—User uploads, plug-ins, and themes increase the amount of storage needed on the NFS, which will also increase the cost.
- *Number of virtual machines needed*—Virtual machines are billed by seconds of usage. If two virtual machines aren't enough to handle all the traffic during the day, you may need a third machine. In that case, you'll consume more seconds of virtual machines.

Estimating the cost of your infrastructure is a complicated task, but that is also true if your infrastructure doesn't run in AWS. The benefit of using AWS is that it's flexible. If your estimated number of virtual machines is too high, you can get rid of a machine and stop paying for it. You will learn more about the pricing model of the different AWS services throughout the course of this book.

You have completed the proof of concept for migrating your company's blog to AWS. It's time to shut down the infrastructure and complete your migration evaluation.

2.4 Deleting your infrastructure

Your evaluation has confirmed that you can migrate the infrastructure needed for the company's blog to AWS from a technical standpoint. You have estimated that a load balancer, virtual machines, and a MySQL database, as well as a NFS capable of serving 1,000 people
