IP address 10.10.0.20. In this case, the firewall allows the request because a rule is in place that allows TCP traffic on port 22 between the source and the destination.

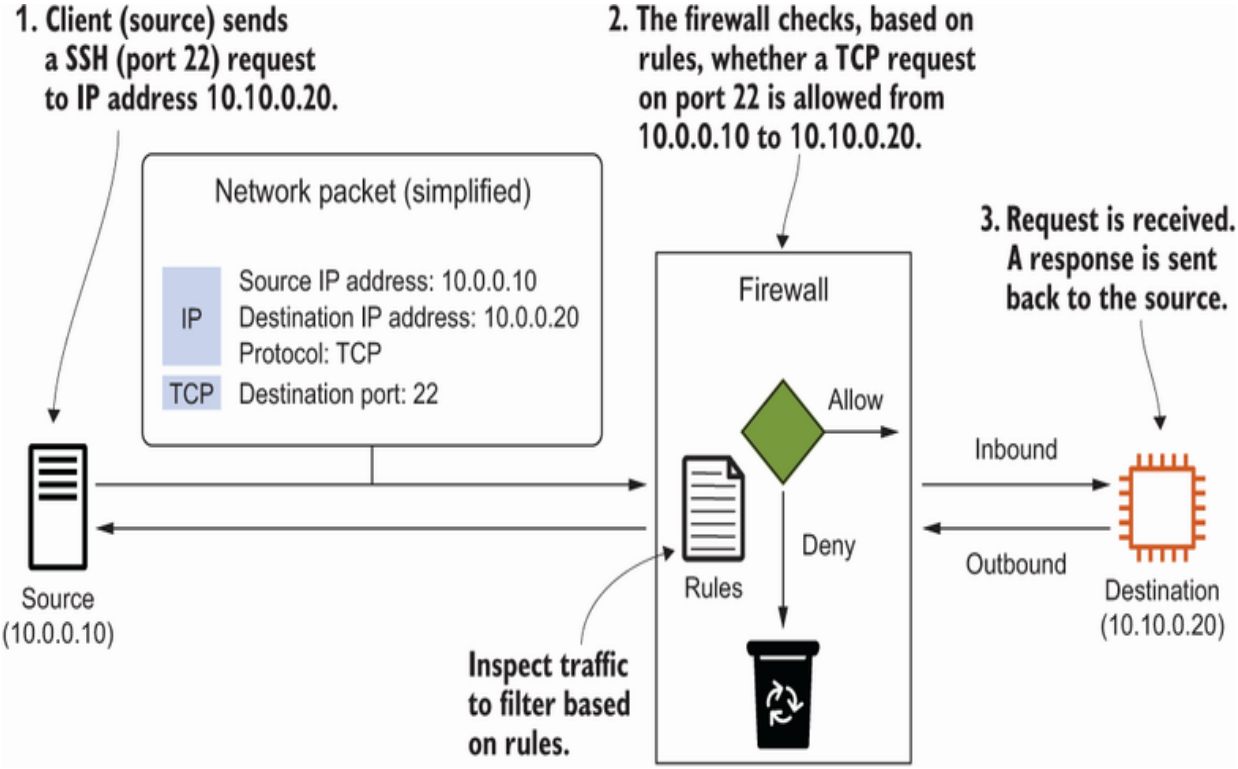

Figure 5.8 How an SSH request travels from source to destination, controlled by a firewall

AWS is responsible for the firewall, but you're responsible for the rules. By default, a security group does not allow any inbound traffic. You must add your own rules to allow specific incoming traffic. A security group contains a rule allowing all outbound traffic by default. If your use case requires a high level of network security, you should remove the rule and add your own rules to control outgoing traffic.
