```
  Properties:
    Domain: 'vpc'
NatGateway:                                    ②
  Type: 'AWS::EC2::NatGateway'
  Properties:
    AllocationId: !GetAtt 'EIPNatGateway.AllocationId'
    SubnetId: !Ref SubnetPublicNAT
RoutePrivateBackendToInternet:
  Type: 'AWS::EC2::Route'
  Properties:
    RouteTableId: !Ref RouteTablePrivateBackend
    DestinationCidrBlock: '0.0.0.0/0'
    NatGatewayId: !Ref NatGateway      ③
```

① A static public IP address is used for the NAT gateway.

② The NAT gateway is placed into the private subnet and associated with the static public IP address.

③ Route from the Apache subnet to the NAT gateway

Last, one small tweak to the already covered backend EC2 instance is needed to keep dependencies up-to-date, shown here:

```
Backend:
  Type: 'AWS::EC2::Instance'
  Properties:
    # [...]
  DependsOn: RoutePrivateBackendToInternet      ①
```

① Helps CloudFormation to understand that the route is needed before the EC2 instance can be created

WARNING The NAT gateway included in the example is not covered by the Free Tier. The NAT gateway will cost you $0.045 per hour and $0.045 per GB of data processed when creating the stack in the US East (N. Virginia) region. Go to https://aws.amazon.com/vpc/pricing/ to have a look at the current prices.

Now you're ready to create the CloudFormation stack with the template located at https://s3.amazonaws.com/awsinaction-code3/chapter05/vpc.yaml by clicking the CloudFormation Quick-
