positive integer value. Use `minute`, `minutes`, `hour`, `hours`, `day`, or `days` as the unit. For example, instead of triggering the website health check every five minutes, you could use `rate(1 hour)` as the schedule expression to execute the health check every hour. Note that frequencies of less than one minute are not supported.

It is also possible to use the crontab format, shown here, when defining a schedule expression:

```
cron($minutes $hours $dayOfMonth $month $dayOfWeek $year)

 # Invoke a Lambda function at 08:00am (UTC) everyday
 cron(0 8 * * ? *)

 # Invoke a Lambda function at 04:00pm (UTC) every Monday to Friday
 cron(0 16 ? * MON-FRI *)
```

See “Schedule Expressions Using Rate or cron” at http://mng.bz/7ZnQ for more details.

Your Lambda function is missing an integral part: the code. Because you are using a blueprint, AWS has inserted the Python code implementing the website health check for you, as shown in figure 6.7.
