

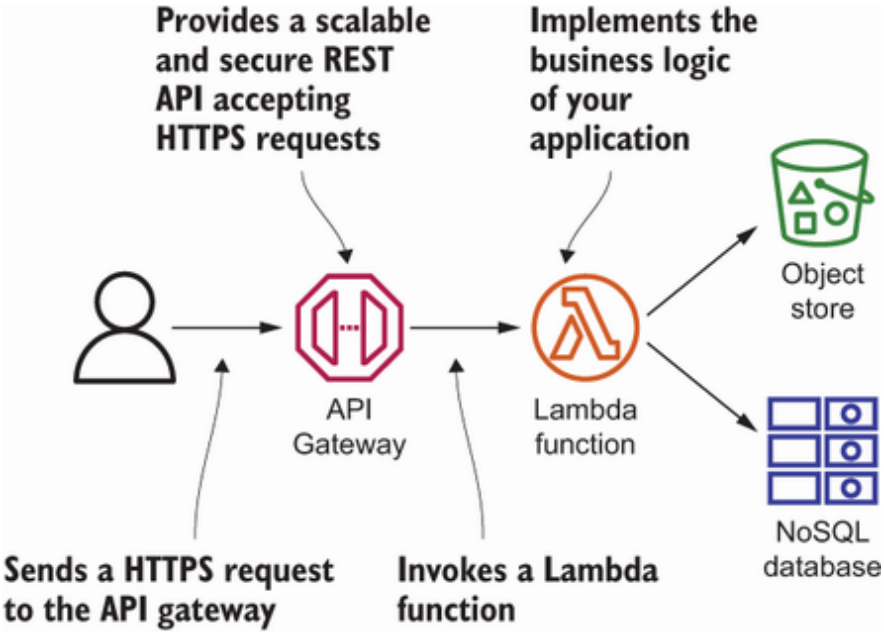

Figure 6.21 A web application build with API Gateway and Lambda

Do you want to get started building web applications based on AWS Lambda? We recommend *AWS Lambda in Action* from Danilo Poccia (Manning, 2016).

6.4.4 Use case: Data processing

Another popular use case for AWS Lambda follows: event-driven data processing. Whenever new data is available, an event is generated. The event triggers the data processing needed to extract or transform the data. Figure 6.22 shows an example:

1. The load balancer collects access logs and uploads them to an object store periodically.
2. Whenever an object is created or modified, the object store triggers a Lambda function automatically.
