3. The Lambda function downloads the file, including the access logs, from the object store and sends the data to an Elasticsearch database to be available for analytics.

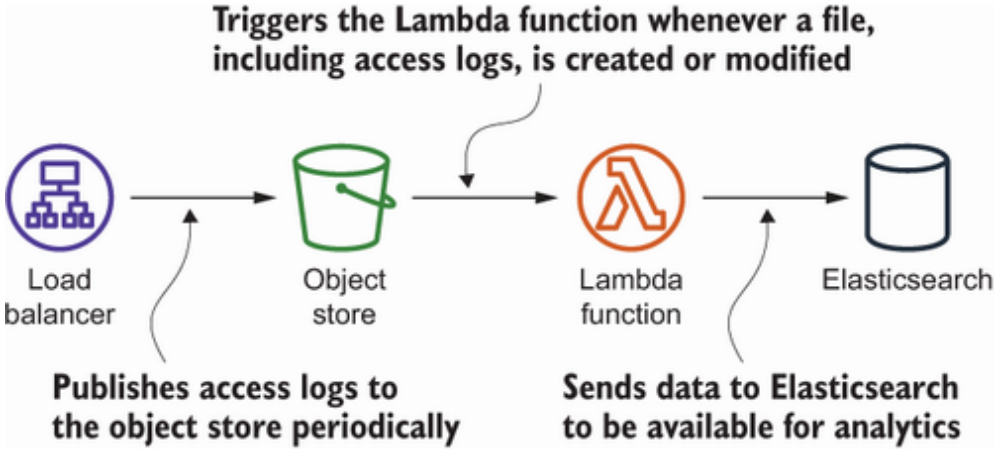

**Figure 6.22 Processing access logs from a load balancer with AWS Lambda**

We have successfully implemented this scenario in various projects. Keep in mind the maximum execution limit of 900 seconds when implementing data-processing jobs with AWS Lambda.

## *6.4.5 Use case: IoT backend*

The AWS IoT service provides building blocks needed to communicate with various devices (things) and build event-driven applications. Figure 6.23 shows an example. Each thing publishes sensor data to a message broker. A rule filters the relevant messages and triggers a Lambda function. The Lambda function processes the event and decides what steps are needed based on the business logic you provide.
