

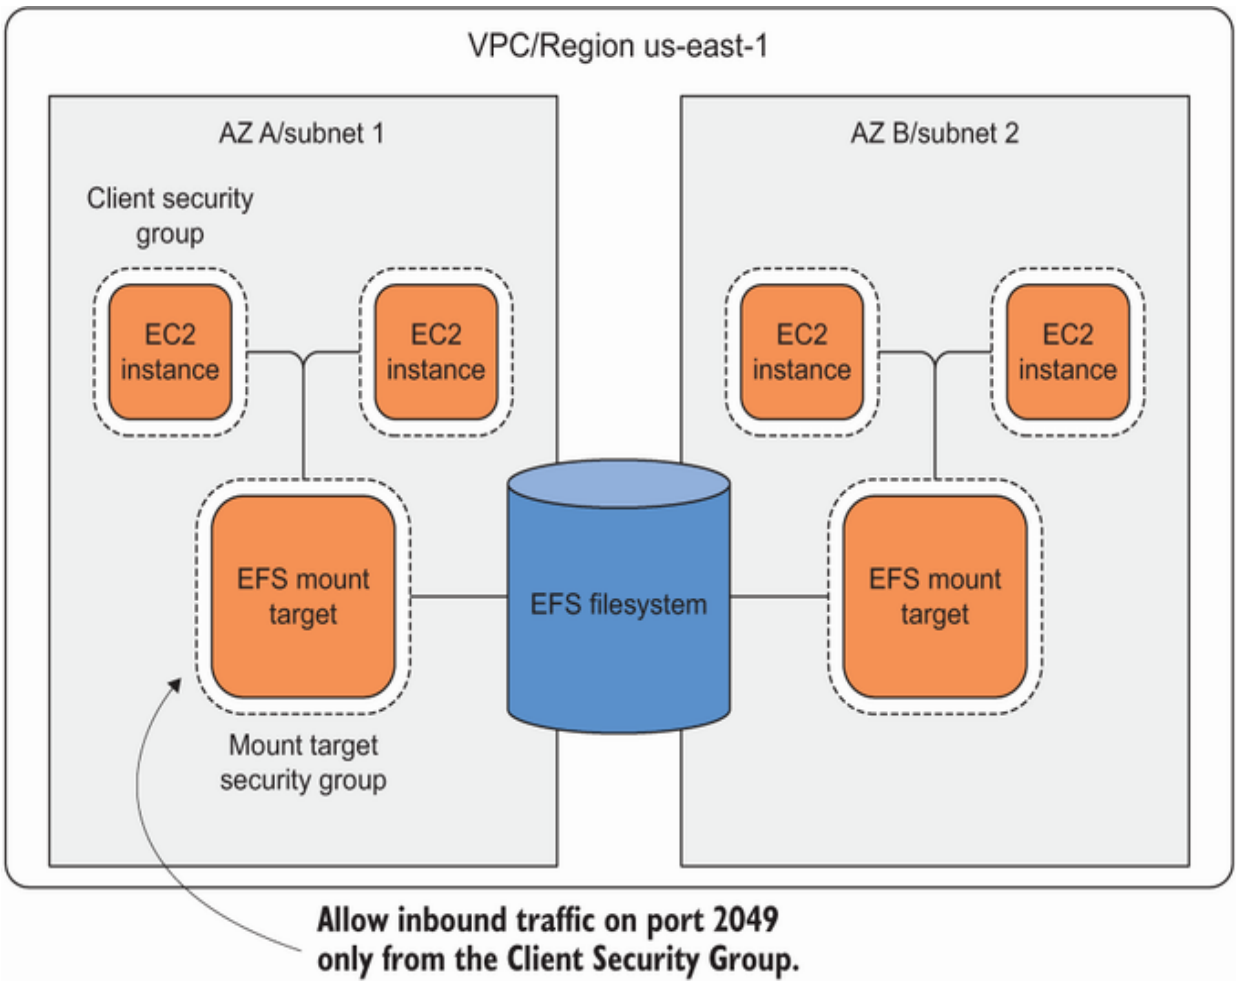

Figure 9.3 EFS mount targets are protected by security groups.

In our example, to control traffic as tightly as possible, you won't grant traffic based on IP addresses. Instead, you'll create two security groups. The client security group will be attached to all EC2 instances that want to mount the filesystem. The mount target security group allows inbound traffic on port 2049 only for traffic that comes from the client security group. This way, you can have a dynamic fleet of clients who are allowed to send traffic to the mount targets.

EFS IS NOT ONLY ACCESSIBLE FROM EC2 INSTANCES In this chapter, we are focusing on mounting an EFS filesystem on EC2
