```
➥ "ParameterKey=AdminEmailAddress,ParameterValue=$AdminEmailAddress" \
➥ --capabilities CAPABILITY_NAMED_IAM
```

Where is the template located?

You can find the template on GitHub. You can download a snapshot of the repository at https://github.com/AWSinAction/code3/archive/main.zip. The file we're talking about is located at chapter11/discourse.yaml. On S3, the same file is located at https://s3.amazonaws.com/awsinaction-code3/chapter11/discourse.yaml.

The creation of the stack can take up to 20 minutes. After the stack has been created, get the public IP address of the EC2 instance from the stack's output by executing the following command:

```
$ aws cloudformation describe-stacks --stack-name discourse \
➥ --query "Stacks[0].Outputs[1].OutputValue"
```

Open a web browser and insert the IP address in the address bar to open your Discourse website. Figure 11.9 shows the website. Click Register to create an admin account.
