Listing 12.14 nodetodo: Retrieving all users with paging (index.js)

```
if (input['user-ls'] === true) {
  const params = {
    TableName: 'todo-user',
    Limit: input['--limit']                                    ①
  };
  if (input['--next'] !== null) {
    params.ExclusiveStartKey = {                               ②
      uid: {S: input['--next']}
    };
  }
  db.scan(params, (err, data) => {                             ③
    if (err) {
      console.error('error', err);
    } else {
      console.log('users', data.Items.map(mapUserItem));
      if (data.LastEvaluatedKey !== undefined) {               ④
        console.log('page with --next=' + data.LastEvaluatedKey.uid.S);
      }
    }
  });
}
```

① The maximum number of items returned

② The named parameter next contains the last evaluated key.

③ Invokes the scan operation on DynamoDB

④ Checks whether the last item has been reached

Use the following command to fetch all users:

```
node index.js user-ls
```

The `scan` operation reads all items in the table. This example didn't filter any data, but you can use `FilterExpression` as well. Note that you shouldn't use the `scan` operation too often—it's flexible but not efficient.
