Executes a shell script on the EC2 instance used to build the AMI

Adds a repository for Node.js 14, the runtime for the Imagery server and worker

Installs Node.js and the libraries needed to manipulate images

Installs Node.js packages for the server and worker

Next, you will learn how to deploy the infrastructure with the help of CloudFormation.

## Deploying S3, DynamoDB, and SQS

The next code listing describes the VPC, S3 bucket, DynamoDB table, and SQS queue.

**Listing 16.8 Imagery CloudFormation template: S3, DynamoDB, and SQS**

```
