18 Building modern architectures for the cloud: ECS, Fargate, and App Runner

This chapter covers

- Deploying a web server with App Runner, the simplest way to run containers on AWS
- Comparing Elastic Container Service (ECS) and Elastic Kubernetes Service (EKS)
- An introduction into ECS: cluster, task definition, task, and service
- Running containers with Fargate without the need for managing virtual machines
- Building a modern architecture based on ALB, ECS, Fargate, and S3

When working with our consulting clients, we handle two types of projects:

- Brownfield projects, where the goal is to migrate workloads from on-premises to the cloud. Sooner or later, these clients also ask for ways to modernize their legacy systems.
- Greenfield projects, where the goal is to develop a solution from scratch with the latest technology available in the cloud.

Both types of projects are interesting and challenging. This chapter introduces a modern architecture, which you could use to modernize
