

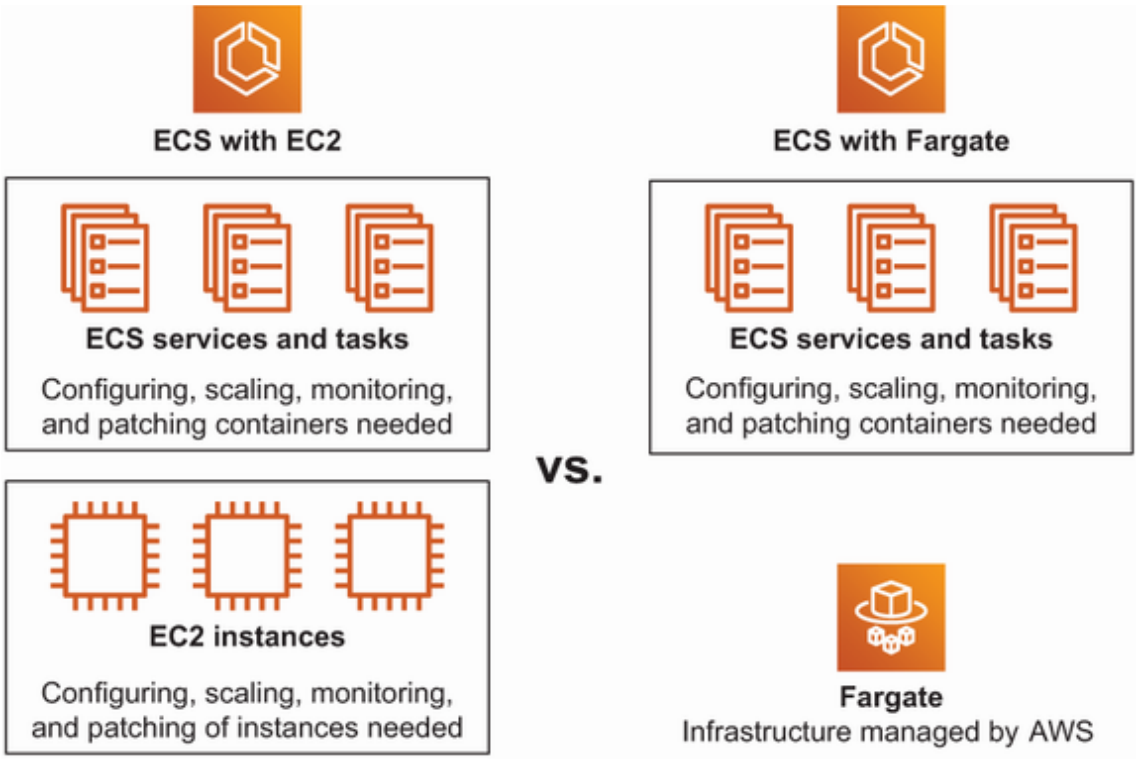

Figure 18.5 With Fargate, you do not need to manage a fleet of EC2 instances to deploy containers with ECS.

By the way, Fargate is available not only for ECS but for EKS as well. Also, Fargate offers Amazon Linux 2 and Microsoft Windows 2019 Server Full and Core editions as a platform for your containers.

With EC2 instances, you choose an instance type, which specifies the available resources like CPU and memory. In contrast, Fargate requires you to configure the provisioned CPU and memory capacity per task. Table 18.2 shows the available options.
