- The Elastic Container Service (ECS) and the Elastic Kubernetes Service (EKS) are both orchestrating container clusters. We recommend ECS for most use cases because of cost per cluster, integration into all parts of AWS, and CloudFormation support.
- With Fargate, you no longer have to maintain an EC2 instance to run your containers. Instead, AWS provides a fully managed compute layer for containers.
- The main components of ECS are cluster, task definition, task, and service.
- The concepts from EC2-based architectures apply to container-based architectures as well. For example, an ECS service is the equivalent of an Auto Scaling group.
