Two-component potting and encapsulation materials

Amatech Innovation has launched the Linkobond 270 series, two-component potting and encapsulation materials for automotive sensors, tyre pressure monitoring systems (TPMS) electronics, RF modules, industrial sensors, and hazardous-area electrical equipment.

The series combines low viscosity, flexibility, adhesion, flame retardancy, and environmental resistance to protect against moisture, vibration, shock, and temperature cycling. Low dielectric properties support RF assemblies, while low shrinkage reduces internal stress. The materials bond with PCBs, copper, and engineering plastics.

TEST & MEASUREMENT

Semiconductor testing system for AI and data centre devices

Teradyne has introduced three new instruments for its UltraFLEXplus platform, targeting accelerated semiconductor testing for AI and data centre devices. The UltraPin5000-EM offers up to 80x more vector memory and 10x faster pattern loading, with Persistence Mode and flexible per-pin clocking. The UltraPort-PCIe6 supports PCIe Gen6 testing at up to 64Gbps with integrated loopback and parametric measurements. The UltraVS64-HP delivers up to 5120A ganged supply with multi-point sensing and dynamic load response.

High-voltage power analyser

Yokogawa Test & Measurement has introduced the WT1500 precision power analyser for high-voltage EV, power-conversion, and renewable-energy testing. It directly measures up to 2000V DC (300kHz bandwidth), eliminating external voltage dividers, while a second element supports up to 1000V at 2MHz for higher-frequency waveforms. Encoder/resolver inputs correlate power with motor position, while IEEE 1588 sync and CAN/CAN FD support automated setups. Applications include xEVs, energy storage, power converters, and renewable-energy equipment.

EV simulating all-in-one testing tool

Fluke has introduced the FEV500, an all-in-one testing tool that simulates an electric vehicle to verify fast DC charging stations without requiring a vehicle. Designed for field technicians, it combines electrical measurement and communication testing through a single connection, supporting ISO 15118 and DIN SPEC 70121 protocols to check charger safety, interoperability, and performance. A guided auto-test workflow provides PASS/FAIL results. The wheeled chassis and removable battery support field deployment across individual, commercial, and fleet charging infrastructure.

MOVES

New premium electric SUV

BYD India has introduced the BYD SEALION 7 Dynamic, expanding its premium electric SUV lineup. The variant uses a 71.8kWh Blade battery with a claimed 520km new European driving cycle (NEDC) range and 0-100km/h acceleration in 7.3 seconds. Built on BYD's e-Platform 3.0, it features cell-to-body battery integration and 'intelligence torque adaptation control' for stability. A rotating touchscreen, panoramic glass roof, and driver-assistance systems target customers seeking premium features and everyday electric mobility.

MISCELLANEOUS

Wireless industrial monitoring platform

BrainChild Electronics has introduced the DR (distributed recording system), a wireless industrial monitoring platform combining distributed sensing, data logging, and centralised management. Its SensNode edge devices connect directly to measurement points, supporting thermocouples, resistance temperature detectors (RTDs), voltage, current, and linear-output sensors while reducing cabling. Sub-1GHz Mesh enables extended coverage and route selection. MeshGate offers browser-based monitoring and open platform communication unified architecture (OPC UA) integration, targeting biotechnology, healthcare, nutraceutical, cold-chain, and laboratory applications.
