Complex Electronics Need Smarter Manufacturing

From AI-server boards to automated SMT lines, ASMPT is advancing electronics manufacturing with smarter placement, software and AI-powered optimisation. See what's next.

NEERAJ BHARDWAJ
General Manager, India, Bangladesh & Sri Lanka

Q. How would you present ASMPT as a brand and as an organisation to a customer, who's new to electronics manufacturing eco-system?
ASMPT is a global market and technology leader in semiconductor and electronics manufacturing. It covers key processes from advanced semiconductor packaging to SMT production. Within the SMT Solutions segment, we focus on enabling the intelligent factory via hardware, software, automation & process expertise.

Q. Besides the machines themselves, speed and quality of Technical Support (provision of Repairs and availability of spares) is a critical factor when investing in high-value equipment. How does ASMPT support in this aspect?
We have an extensive coverage of sales and service centres in India. We also have business partners Maxim SMT Technology and ALN Tronics to support us in delivering to our customers. In addition, besides the team in India, support can come from a global level. Customer support and satisfaction are also our priority.

Q. How was FY 25-26 for ASMPT in South Asia? And India?
We had exceeded our expectations last year and we are proud to share that it was a recording breaking with over 350 machines order in the South Asia market.

Q. How's FY 26-27 looking for you?
Currently, with the government support in the electronics industry, and the industry demands on AI and Telecommunications, the outlook is looking positive.

Q. Are there any key application areas/industry segments driving demand for your machines?
There are several segments:
- **AI servers and HPC** – major growth areas
- **IT and network infrastructure** – increasing demand
- **Automotive and industrial electronics** – key established markets
- **Smartphones and consumer electronics** – high-volume applications

Across these segments: higher complexity, higher quality requirements and increasing automation are needed, and we see that ASMPT can fill in the gaps.

Q. What are the highlights of your booth at this event?
There are a number of highlights:
- **India debut of the new SIPLACE V** – our key highlight at Productronica India
- Live demonstration of **large BGA placement for AI-server applications on the SIPLACE SX**
- **DEK TQ** for highly precise solder paste printing
- **WORKS Software Suite and SMT Analytics** – using production data to improve yield
- Latest **Virtual Assist**, including enhanced AI chat and image-based spare-parts recognition
- Our new **Customer Portal** for easier access to services and support

Q. What's special about SIPLACE V?
The SIPLACE V is a **completely new placement platform, developed from the ground up**. It **combines performance, quality and flexibility.** The SIPLACE V is real game changer in terms of performance. It achieves a performance increase of **up to 30% more real performance in key applications, provides a** broad component spectrum: **from 016008M components to large and challenging OSCs. There are three specialized and optimized placement heads, of which the** Placement Head CP20 delivers up to **52,500 cph at ±25 µm @ 3σ.**
It is **highly flexible,** allowing various options such as as a single- or dual-lane, Smart Pin Support, 90 feeder slots, Tray Unit SIPLACE V Ready for the future, the SIPLACE V is prepared for **further automation and AI-based analysis functions.**

Q. How do these features translate into benefits for the customers?
There are various benefits:
- **More capacity from available factory space** thanks to the compact 2.4 × 1.1 m footprint
- **Fast adaptation** to changing products and volumes
- Efficient **high-volume and high-mix production**
- **Compatibility** with existing SIPLACE X feeders and established ASMPT software
- **Step-by-step integration** of future technologies and automation
- **Long-term investment protection**

Q. Any specific type of customers who will benefit more?
We cater to customers across all segments, including both EMS and OEM organizations, serving key industries such as Automotive, IT Hardware /AI Servers , Mobile Devices, Aerospace and Industrial Electronics.

Q. What are the symptoms or challenges being faced by customers which SIPLACE V promises to overcome?
Electronics manufacturers today face a constant challenge: doing more with every square meter of the factory floor while adapting faster to an ever-changing product mix. Higher equipment utilization, rapid changeovers, well-balanced lines, consistently high yields, smarter material management, and long-term investment protection are all critical to staying competitive. The latest V platform, seamlessly integrated with our advanced software suites, is designed to turn these challenges into opportunities—enabling manufacturers to build more agile, efficient, and future-ready production environments.

Q. From an engineering perspective, what are the key technological changes in SIPLACE V—particularly in its placement head, motion system, and vision architecture—that enable higher throughput while maintaining placement accuracy?
There are a number of technological changes:
- **New, more rigid machine design for higher dynamics**
- **Up to 6G acceleration and optimized travel paths** for higher throughput
- **Efficient linear drives and high-resolution measurement** systems for speed and precision
- **Placement Head CP20 with 20 independently driven segments** for individual component alignment during movement
- High-resolution vision and **closed-loop correction of X, Y and angular offsets**
- **Integrated component sensor** for monitoring from pickup to placement and height measurement down to 50 µm
- **Gigabit Ethernet and Free Space Optics** for high-bandwidth, low-latency data transmission
- Integrated mechanics, sensors, vision, data and software as the basis for higher real performance

Q. When was it launched globally? And is it available in India now?
The SIPLACE V platform made its global debut at Productronica Munich in November 2025, marking the beginning of an exciting new chapter in electronics manufacturing. Its market introduction is planned globally, including India, starting in Q3 2026.

Q. Coming to SIPLACE SX and accompanying DEK TQ printer—what's special about the duo?
Both platforms are **designed for high precision and integrated process quality**. For the **DEK TQ**, it is a precise and stable solder-paste printing, while the **SIPLACE SX** is machine-integrated quality control from pickup to placement. They are both **ready for the demanding AI-server applications.**

Q. How do these features translate into benefits for the customers? Any specific type of customers who will benefit more?
Customers who are **entering new markets such as AI servers and HPC** with the proven SIPLACE SX platform. The SIPLACE SX is a highly flexible platform, it **protects previous investment** and is capable in handling high-value applications with high process reliability.

Q. AI, HPC and advanced computing boards are increasingly using very large, heavy and complex BGAs. What fundamentally changes in the placement process when component size and mass move beyond conventional SMT packages?
Some changes include:
- **Large and heavy BGAs** require significantly more demanding handling
- **Component-specific pickup** requires adapted nozzles, suction capacity and defined pickup zones
