assembly, and testing for QFN, BGA, and custom packages, supporting IndieSemiC's SiP modules and discrete devices, alongside package co-development and New Package Introduction strategies for India manufacturing.

KOTRA drives Korean semiconductor supplier push into India

Korean semiconductor materials, components, and equipment firms are seeking supplier roles in India, which commits $8.4 billion in ISM subsidies. Nine of twelve projects focus on back-end processes. At SEMICON India 2026, Korean firms held 80 consultations with Indian buyers, including Tata Electronics and Kaynes.

NIELIT, Infineon launch hands-on semiconductor manufacturing centre

Infineon is providing eight industry-grade machines to NIELIT Ahmedabad's new Semiconductor Manufacturing Centre for backend training, covering die bonding, wire bonding, moulding, trimming, and lead forming. The centre targets students, technicians, and researchers amid India's assembly, testing, marking, and packing (ATMP) and OSAT demand.

Tamil Nadu plans ₹1.75 billion semiconductor-electronics manufacturing park in Kanchipuram

Tamil Nadu is planning a semiconductor and electronics manufacturing park in Kanchipuram through SIPCOT, with an investment of ₹1.75 billion. Chief Minister C. Joseph Vijay said the facility will include R&D infrastructure supporting manufacturing units. It is expected to draw ₹20 billion in investment and create around 5000 jobs.

Karnataka tops India's semiconductor drive via ChipIN support

Karnataka leads India in ChipIN Centre-supported semiconductor activity, with 81 organisations, 73 tape-outs, and 8.8 million EDA tool usage hours, according to MeitY. Tamil Nadu follows with 79 organisations and 33 tape-outs, while Telangana has 42 organisations and 28 tape-outs. ChipIN provides design infrastructure, hardware, and IP.

Hindustan Zinc eyes zinc-based batteries as alternative to lithium

Hindustan Zinc is exploring zinc-based batteries as an alternative to lithium, CEO Arun Misra said, citing limited domestic lithium supply and safety concerns. Zinc could offer a safe, stable option for varied electronics and industrial applications.

India and Belgium expand semiconductor and defence tech cooperation

India and Belgium plan to link Belgium's IMEC with India's semiconductor ecosystem, Prime Minister Modi said, alongside defence electronics cooperation covering electro-optical systems, mine-detection, rockets, counter-drone systems, drones, and wider technology transfer and co-production.

BlueHill backs Makr in ₹102 million semiconductor metrology deal

Bluehill.VC has led a ₹102 million seed round in semiconductor metrology startup Makr Microsystems, with participation from Artha Venture Fund. Makr's Acoustic Atomic Force Microscopy enables nanoscale subsurface measurement, aiding advanced packaging, hybrid bonding, chiplet interconnects, and defect detection.

IIT Bhubaneswar, IIT (ISM) Dhanbad sign MoU for semiconductor research

IIT Bhubaneswar and IIT (ISM) Dhanbad have signed an MoU making semiconductor technology an initial joint research focus. The five-year agreement covers joint research, PhD supervision, faculty exchanges, shared funding and lab access, and jointly operated large experimental facilities.

Qualcomm secures landmark $60bn Amazon AI chip deal

Qualcomm signed a multigenerational Amazon Web Services (AWS) deal worth up to $60 billion over a decade for custom AI inference silicon and 1.6Tbps optical links. Amazon receives a warrant for 25 million Qualcomm shares, while Qualcomm will expand AWS use for EDA worldwide.

Intel-backed Altera prepares $2bn IPO return to public markets

Altera is preparing for an IPO that could raise over $2 billion, among the largest semiconductor listings since Arm's 2023 offering. Silver Lake, which acquired a 51 per cent stake from Intel, has appointed four banks to lead underwriting. Altera makes FPGAs for telecom, data centres, robotics, aerospace, defence, and AI.

Samsung shares fab expertise with South Korea's public Nano Fabs

Samsung Electronics has shared fab-management practices with South Korea's public nano fabs, focusing on safety, cleanroom discipline, equipment maintenance, and efficiency. The programme ran from March to August 2026 at POSTECH's fab. MSIT plans to extend the model across MoaFab's fabs.

SK Hynix considers Japanese JV to meet NAND demand

SK Hynix is evaluating Japanese sites for a NAND/memory fab joint venture, prioritising power and water, amid AI-driven shortages. It has committed 54 trillion won in South
