At-a-glance view of key industry trends that can shape the future of your business…

India PCB Market Projected To Reach US$25.48 Billion By 2034

India's PCB market is projected to grow from US$8.35 billion in 2026 to US$25.48 billion by 2034, at a 14.96% CAGR. In 2025, the base year, bare PCBs accounted for 74% of the market, while single-sided boards held 53%. Populated PCBs represented 26% and are projected to be the fastest-growing manufacturing type. Multilayer PCBs held 19.6% and are forecast to be the fastest-growing layer segment, supported by demand from 5G, automotive electronics, and smartphones.

Indian PCB (Printed Circuit Board) Market Growth Trend (2020-2034)

India's ESDM Sector Targets $500 Billion Manufacturing By FY30

India's Electronics System Design and Manufacturing (ESDM) production reached ₹13.11 trillion in FY2025-26, up 15.8% year-on-year, while electronics exports reached ₹4.24 trillion. Production is projected to reach US$300 billion by 2026, against the US$500 billion electronics manufacturing target for FY30. PLI-supported large-scale electronics manufacturing had attracted over ₹206 billion investment, ₹11.62 trillion production and ₹6.53 trillion exports by March 2026. More than 40 major component manufacturers have established or expanded operations, while domestic value addition has risen from 15% to 23%, indicating deeper ESDM localisation.

Comparative Overview of India's Electronics Ecosystem

Sector/Domain	2025-26 Baseline/ Latest Data	2030-32 Outlook	Growth/ CAGR	Dominant Growth Drivers
Semiconductor Demand	US$44 bn in FY2025-26	US$90 bn by FY2029-30	~19.6% implied CAGR	Mobiles and wearables, computing, industrial, automotive, green power, telecom
ECMS	₹695.48 billion approved investment; ₹5.34 trillion projected production	—	—	Components, sub-assemblies, materials, domestic value addition
Automotive Semiconductors	₹199.95 billion in 2024	₹434.90 billion by 2030	15.42% CAGR	ADAS, telematics, vehicle ECUs, automotive electronics
EV Semiconductors	US$130 mn in 2025	US$550 mn by 2030	23% CAGR	BMS, power management, motor control, MCUs, sensors, power ICs/modules, SiC/GaN
Electronics System Design and Manufacturing (ESDM)	US$300 bn projected electronics production by 2026	US$500 bn electronics manufacturing target by FY30	—	Large-scale manufacturing, exports, components, localisation

Advanced Packaging Capacity Tightens As AI Chips Grow

AI chip growth is tightening advanced-packaging capacity as larger packages and additional HBM modules push CoWoS-S towards physical limits. Nvidia's high-end GPU shipments are expected to grow about 30% YoY in 2026, while AMD's MI400/MI450 adds shipment momentum. TSMC's CoWoS-L, adopted by Nvidia, AMD, and Meta's MTIA 400, is expected to remain the mainstream AI-chip packaging solution through 2028. AWS and Microsoft are expected to adopt it in 2027, while Intel's EMIB-T offers an alternative.

TSMC CoWoS vs Intel EMIB

Supplier	Packaging Technology/ Specification	2024	2025	2026	2027	2028
TSMC	CoWoS Solution	CoWoS-S		CoWoS-L		
	Reticle Size	3.3X		5.5X	9.5X	14X
	SoC/Chiplet Count	2		4	8	20
	HBM Module Count	8		12	12	20
Intel	EMIB Solution	EMIB		EMIB-T		
	Reticle Size	4X		>8X		>12X
	HBM Module Count	–		12		>24
