Key Technology Advancements (2025-2026)

ADVANCEMENT GROUP	TECHNOLOGY TREND	WHAT IS CHANGING	WHY IT MATTERS TO BUYERS
1. Speed and Productivity	Higher real-world placement speed	Machines are improving throughput while maintaining placement accuracy under actual production conditions	Higher UPH/CPH and better line productivity
	Faster changeover	Automated setup, feeder preparation and software-assisted changeover are reducing product-change time	Higher machine utilisation, especially for EMS/high-mix production
	Parallel/multi-head placement	Multiple placement heads and optimised component sequencing improve productivity	Higher throughput without proportionally increasing machine footprint
2. Precision and Miniaturisation	Ultra-small component placement	Improved heads, nozzles, vision and placement control support increasingly smaller components such as 01005/016008-class components	Enables miniaturised and high-density PCB designs
	Advanced vision systems	Higher-resolution cameras and improved component/PCB recognition are being integrated into placement	Better placement accuracy and fewer component-related defects
	Closed-loop placement control	Real-time sensing and feedback continuously monitor and correct placement parameters	Improves accuracy, consistency and first-pass yield
	PCB warpage compensation	Machines can detect PCB height/warpage and compensate placement accordingly	More reliable placement on thin, large or warped PCBs
3. Flexibility and High-Mix Manufacturing	Wide component range	A single platform increasingly handles tiny chip components through large BGAs, connectors and odd-form components	Reduces need for dedicated machines and increases production flexibility
	Flexible placement heads	Heads can accommodate different component types and placement requirements	Better machine utilisation across diverse products
	High-mix optimisation	Software and machine architecture are increasingly designed for frequent product changes	Particularly valuable for EMS and low/medium-volume production
4. Artificial Intelligence and Automation	AI-assisted optimisation	AI/data analytics are increasingly being used for placement optimisation, process monitoring and decision-making	Improves productivity and reduces dependence on manual optimisation
	Predictive maintenance	Machine, feeder, nozzle and production data are analysed to identify potential failures	Reduces unplanned downtime
	Intelligent feeders	Feeders increasingly provide identification, monitoring and condition information	Fewer feeder/component errors and faster setup
	Automated machine setup	More setup activities are being automated or software-assisted	Reduces operator dependency and setup time
5. Connectivity and Smart Factory	Industry 4.0 connectivity	Machines increasingly support standards such as IPC-HERMES and IPC-CFX and integrate with MES/factory systems	Enables connected production and centralised monitoring
	Real-time production analytics	Machine and line data are captured and visualised in real time	Better OEE, productivity and process decisions
	Traceability	Component, feeder, PCB and placement information can increasingly be tracked throughout production	Supports quality management and customer traceability requirements
6. New Applications and Future-Ready Platforms	Large/odd-form component placement	Placement platforms are expanding beyond conventional chip shooting	Reduces separate process requirements
	Advanced packaging integration	SMT placement technology is increasingly overlapping with die attach, flip-chip and SiP applications	Opens new applications beyond conventional SMT
	Modular/future-proof architecture	Platforms are designed to accommodate new heads, feeders, software and production requirements	Protects the customer's investment over a longer machine life
	Energy efficiency	Newer machines focus on lower power consumption and more efficient operation	Reduces operating cost and supports sustainability goals

Inline Pick & Place Brand(s): JUKI, UNIVERSAL INSTRUMENTS
Desktop Pick & Place Brand(s): DDM NOVASTAR

KYORITSU ELECTRIC INDIA PVT LTD
Website: www.kyoritsuelectric.com
Address: Plot No.10(P), Survey No. 234, 235 & 245 India Land Global Industrial Park, Rajiv Gandhi Infotech Park, Phase 1, Hinjewadi, Pune, Maharashtra, India - 411057
Email: sales@kyoritsuelectric.com
Contact: 020-24668247
Inline Pick & Place Brand(s): ESSEMTEC, JUKI
Desktop Pick & Place Brand(s): VOLTERA

LEAPTECH CORPORATION
Website: www.leaptech.in
Address: C-419, Indiranagar, TTC Industrial Area, Turbhe MIDC, Navi Mumbai, Maharashtra - 400703, India
Email: info@leaptech.in
Contact: 022-49730589, +91-9321710216
Inline Pick & Place Brand(s): YAMAHA

MAXIM SMT TECHNOLOGIES PVT LTD
Website: www.maximsmt.com
Address: Plot No.78 A, Sector-5, IMT Manesar, Gurugram, Haryana, India - 122050
Email: sales@maximsmt.com
