Snapsack, worn over the shoulder on the left side, for personal belongings

Serpent, lever that held the burning match

Pan and pan cover, which pulls out sideways

Trigger guard

Matchlock musket
The 17th-century musket was a fairly primitive firearm. The priming powder in the pan was ignited by a match (a cord soaked in saltpetre) that was held in the serpent. The action of pulling the trigger depressed the serpent so that the lighted match touched the powder. The resulting flash ignited the charge through a vent in the side of the barrel.

Cartridge bag
Some soldiers carried prepared paper cartridges with musket balls and measured charges.

Bandolier worn across the chest

Stock of musket, pouch for musket balls and powder flasks

Powder horn
Some musketeers who did not have bandoliers carried a powder horn, at this time more associated with hunters than the military. It was slung over the left shoulder for right-handed access.

Depressing button allows powder to flow into spout

Musketeer holds thumb over spout while releasing measure of powder

Breeches tied just below knee

Coloured bow, used to fasten breeches

Breeches and stockings
The soldier in the New Model Army had to provide his own breeches and stockings. Typical of what he might have worn are these "sadd" (grey) woollen breeches and thick thigh-length woollen stockings.

Plain flat stock used as a club in hand-to-hand fighting

Laces made of homespun lucetted (braided) cord

Latchet shoes
These sturdy, thick-soled hobnailed shoes were fastened with laces (latchets).
