Chainmail coat
Long strips of metal were drawn out to form wire. This was wound tightly around a metal pole then removed and individual coils clipped from the spiralled wire. It could weigh about 14kg (30lb).

Chainmail with leather padding

Belt and bag
This is a replica of a belt found at Gokstadt, Norway. Pouches are likely to have been smaller than this example. Axes are thought to have been placed shaft-first into the holder and secured with a leather case to prevent shifting.

Pouch for provisions

Axe holder

Links riveted individually

Hobnails in sets of three in this replica

Hose
These drawstring trousers were worn with an overtunic, although poorer men might have worn just a long overtunic together with windings wrapped around the legs.

Unbleached linen

Hedeby shoes
These are replicas of Viking ankle boots found at Hedeby. Shoes were probably made to measure.
